**Approved Pesticides for Use in the Cultivation of Medical Marijuana**

Pursuant to rule 3796:2-2-01 of the Administrative Code, the Department of Commerce (“Department”) has developed a list of pesticides approved for use by licensed medical marijuana cultivators. As no pesticides are currently approved at the federal level for use on cannabis, the Department has conducted research on pesticides approved by other states for use in the cultivation of medical marijuana. The following list contains pesticides approved by the Department as a result of that research.

It is the responsibility of the cultivator to ensure that any pesticide being used in the cultivation facility:

- a) contains an active ingredient that is on the list;
- b) is not prohibited for use in the facility by the label;
- c) is registered with the Ohio Department of Agriculture; and
- d) is registered with the United States Environmental Protection Agency under section 3 of the Federal Insecticide, Fungicide, and Rodenticide Act, 7 U.S.C. 136 - 136y (2012); or
- e) is exempt from registration under 40 C.F.R. 152.25(f) (2015) and the active and inert ingredients of the pesticide product are authorized for use on crops or plants intended for human consumption by the United States Environmental Protection Agency.

The use of a pesticide, fertilizer, or other chemical by a cultivator that is inconsistent with the product's label or in violation of pesticide use restrictions set forth in Division 3796. of the Administrative Code may result in action being taken by the Department pursuant to rule 3796:5-6-01 of the Administrative Code.
